iPad, connections and moving it around

The iPhone must not be removed from the vehicle it is connected to, nor should the following occur.

1. **Do not** remove the cables, the extension cable point or any of the points of contact from the iPhone to the extension to the new Belkin Premium Charger at any stage. The cord has been wrapped around the Steering column (still allows for the steering wheel to turn with easy). The reason for the cord being wrapped around, is to keep the connection between the extension cable and the cable from moving by gravity or by accidental bumping. The connector sit at the top of the steering wheel and does not move much (evening on hard turns – we tested it – not that you would drive like Graham did).

2. **Do not remove** the Belkin Charger Unit from the Double Adapter. There is green light that comes on when the car comes on and this should remain on the double adapter at all times.

3. If you are going to go on a break during the day and the sun is blaring through the window, take the iPad off the magnetic holder point and place it on top of the back of the steering wheel or near the odometer, away from the sunlight. Again though, **do not remove** the iPad from the car, do not take the iPad out of the car, do not remove the charging cable from the iPad to move the iPad. All connections must remain intact. The reason for this is simple. In Graham's words "Everyone has a different level of strength when pulling and inserting items. This can cause the connector pins scratching each other internally and lose surface area conduction. The more we fiddle, and pull out and put in a cable, the looser it becomes."

The connections and the way the system is setup is designed to be as ergonomically as possible and to ensure that the system is operating at full charge and is working at optium level. **Do not change the setup**, the connections or the positions to suit your own individual need. This can create many issues and affects the ability for the system to work efficiently and for other chauffeurs to do their job.

   Question: On "Hot days" or for safety when chauffuer is leaving vehicle temporarily is it also acceptable to place the i-phone into the centre well or glove compartment which are both concealed?
   a. answered by @steve.baltzois 20-Jun-2020 15:08
      a. leaving the vehicle temporarily this is acceptable. If this is the end of the shift the iPhone is to be placed in the trunk of the vehicle in the provided bags.
