Error Message

Unable to connect to Server notice (Network Connection Error)

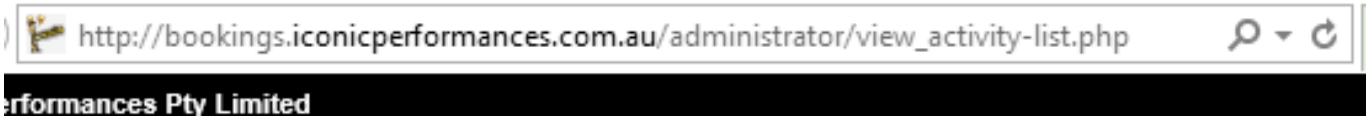

when you get Error of "Unable to Connect", call me to fix not possible and send email to me not possible. Â

When Unable to connect to Server notice displaying you must do the following:

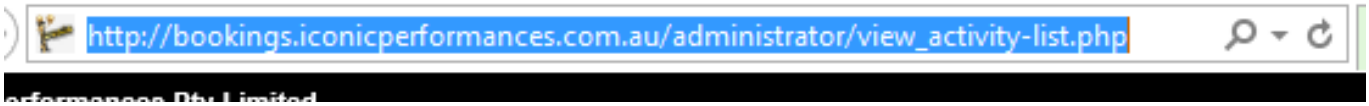

This is what Jeet say on Ticket System. "I do not have time to do this for each and every page. There are at least more than 1000 ajax calls functions in whole ERM and if i decide to do this for each and every page it would take 1 person fulltime one month to get this done on whole erm.

So please type in the URL of pages on which you do receive it most of time so that i can apply this fix for every ajax call on that page." Â

If you do not know what to get URL it is address on top of page that start with https://

Press in the address field or highlight all address and copy address.Â You know you have highlighted when it goes blue

Press right mouse and select copy or press Ctrl + C

Â

Then in Slack Communications to Jeet or to Support Paste URL and tell us here.
